

InsightAI Project Proposal

Prepared By Datta Sai Pavan and Rachana Sree

Budget & Resource Approval Request

1. Executive Summary

InsightAI is a secure, enterprise-grade AI platform that enables intelligent document interaction (Q&A, summaries, flashcards, audio overviews) within a **100% self-hosted infrastructure**. Unlike external tools, sensitive organizational data never leaves our internal environment, completely eliminating third-party compliance risks.

2. Business Value & Use Cases

- **Legal & Compliance:** Contract analysis and secure policy search.
- **Healthcare:** Clinical document assistant protecting patient data privacy.
- **Enterprise & Gov:** Secure SOP/HR management with strict data residency.

3. Technology Stack (Open-Source)

- **Frontend:** React + TypeScript
- **Backend:** FastAPI + PostgreSQL
- **AI/LLM:** Ollama (On-premise inference)
- **Audio:** Whisper (STT) + Coqui TTS
- **Deployment:** Docker Environment

4. Project Scope & Timeline

The initial development phase aims for a **9-week timeline**, structured into four clear phases to ensure progressive delivery and quality control.

- **Phase 1: Planning & Foundation (Wks 1-2):** Architecture, database setup, UI/UX.
- **Phase 2: Core Development (Wks 3-4):** Auth, backend logic, and document parsing.
- **Phase 3: AI Development (Wks 5-7):** AI integration, RAG pipeline, and local LLM chat.
- **Phase 4: Testing & Deployment (Wks 8-9):** Audio features, optimization, security, and Docker delivery.

5. Budget Considerations

The requested budget encompasses the core categories required to securely host and develop the platform on-premises:

- Development & Testing Resources
- GPU Hardware (for local LLM inference)
- Cloud/Infrastructure & Deployment
- Maintenance & Contingency
